

mode

Mode is a collection of door furniture that offers the Allgood quality of design and materials, with a more dynamic aesthetic

mode

Mode is a more ergonomic collection of door furniture fulfilling a more creative aesthetic. The range comprises seventeen dynamic and striking designs of levers, with six coordinated pull handles, all with the quality of material and manufacturing you would expect from Allgood.

Crafted in grade 316 stainless steel and mounted on our patented Quadaxial™ rose tested to a million cycles, Mode offers eye-catching style and reassuring substance; made exclusively in Britain at our own manufacturing plant, with a 25 year warranty across the range.

Allgood is the only UK architectural ironmonger with its own UK manufacturing activity. Operating from our Birmingham site, we routinely produce 100,000 pieces of hardware a year with an uncompromising attention to detail by our team of skilled craftsmen with decades of experience.

Mode is only made from grade 316 solid stainless steel, the highest quality material possible.

Our commitment to quality

We passionately believe that a quality of design must be matched by a quality of performance. Therefore, we only use the finest materials and design and manufacture our ironmongery to exceed British, European, and ANSI standards. With Mode, this means a range of stunning ironmongery with low maintenance and high performance guaranteed.

Allgood's patented Quadaxial[™] rose has been independently tested to over one million cycles, far exceeding all current performance standards.

Mode Lever Handles

Spectra

Every element of Mode is available in a kaleidoscope of decorative finishes from our Spectra range. Comprising; Spectra Colour, Spectra Tone and Spectra Tech, this comprehensive finishes solution can match and complement any desired aesthetic, and all come with our warranties.

Spectra Colour is our powder coating process, available in any RAL colour such as blacks (RAL 9005, 9004) and is suitable for internal and external application.

Spectra Tone applies a simulated metal finish through an electrophoretic process for those projects where satin brass, gold or bronze is required. We have custom Spectra Tone options where a further translucent coating is added to create our distinctive BF.

Spectra Tech is our premium PVD vacuum coating process that results in a superior decorative finish in a range of metallic colours, both satin and polished. A hard-wearing, scratch resistant solution, with excellent durability.
